FEDERAL COMMUNICATIONS COMMISSION  
OFFICE OF THE SECRETARY

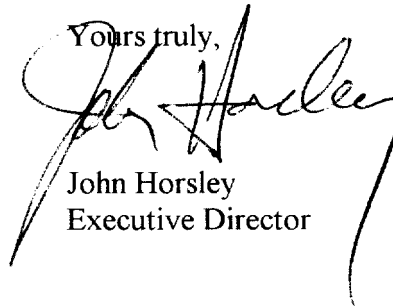

RE: Service Rules for the 5.850-5.925 GHz Band and Revisions to Part 90 of  
the Commission's Rules (DA 01-1047, WT Docket No. 01-90)

Dear Sir or Madam:

Enclosed are an original and nine copies of AASHTO's Reply Comments  
concerning Service Rules for the 5.850-5.925 GHz Band and Revisions to Part 90 of the  
Commission's Rules.

Do not hesitate to inform me if you have further comments or questions regarding  
this submittal.

Yours truly,

John Horsley  
Executive Director

Reply Comments of:

The American Association of State Highway and Transportation Officials

To: The Commission

AASHTO is the national association of the state departments of transportation officials for the 50 states, the District of Columbia and Puerto Rico. Affiliate and Associate members include City, County and other transportation authorities. Its scope includes all five major transportation modes, and its major purpose is to foster the development, operation and maintenance of an integrated national transportation system.

AASHTO, through its Special Committee on Wireless Technology has been active in matters related to wireless telecommunications system design, construction and operations for more than 50 years. AASHTO is a member of the Intelligent Transportation Society of America with membership in many ITSA committees including the telecommunications committee.

## **Background Information**

On October 22, 1999 the Commission issued a Report and Order allocating 75 MHz of spectrum in the 5.850-5.925 MHz band to the mobile service for use by Dedicated Short-Range Communications (DSRC) systems. The DSRC service is defined as: the use of non-voice radio techniques to transfer data over short distances between roadside and mobile radio units, between mobile units, and between portable and mobile units to perform operations related to the improvement of traffic flow, traffic safety, and other intelligent transportation service applications, in a variety of public safety and other intelligent transportation service applications, in a variety of public and commercial environments. DSRC systems may also transmit status and instructional messages related to the units involved.

In its Petition for Rulemaking, the Intelligent Transportation Society of America, ITSA did not propose a specific channelization plan, licensing method or technical rules. AASHTO has been active in the collective efforts of potential users of DSRC systems as well as equipment manufacturers in reaching consensus for adopting the best technical standards and channelization plans for DSRC systems. ITSA has developed a list of applications for DSRC systems, which are listed in its initial petition filed May 19, 1997. In total these applications have great promise to increase the safety and efficiency of the nations' surface transportation system.

The primary justification cited by the Commission in allocating the spectrum for DSRC systems was Public Safety operations. The channelization plan adopted by the Commission must guarantee that Public Safety services are allocated sufficient dedicated channels to accomplish their goals, which include the mitigation of the loss of life and property. The band plan and accompanying technical standard must also be flexible enough to allow the deployment of private services including electronic toll collection and other automated payment systems. The development of products for these systems will result in a lower cost to the Public for all systems through the economies of scale.

## **REPLY COMMENTS**

The record in this proceeding includes the comments of the Public Safety Wireless Network, PSWIN. The PSWIN agrees that the provision of a direct link between in-vehicle or highway infrastructures and emergency services personnel is beneficial. PSWIN states that these goals are not yet within reach. AASHTO, respectfully disagrees, as a matter of fact, the purpose of this proceeding is to develop a complete record in order that the appropriate service rules and technical standards can be finalized. That action will expedite the supply of the equipment necessary for widespread deployment of DSRC systems.

AASHTO agrees with the PSWIN, that information exchange and cooperation between the first responder Public Safety members and transportation agencies will prove to be mutually beneficial.

## **CONCLUSION**

AASHTO is a member of the ITSA DSRC Standards Writing Group. We are confident that the recommendations of that group will enable the Federal Communications Commission to release a Notice of Proposed Rulemaking which will result in the appropriate service rules for DSRC systems operations.

AASHTO has reviewed the Comments filed by the Intelligent Transportation Society of America in this proceeding and supports them in their entirety.

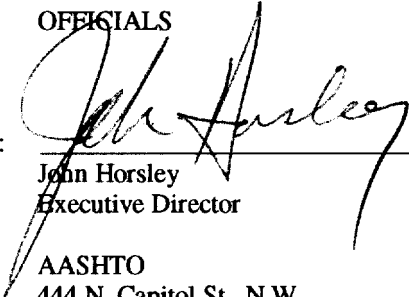

Further, AASHTO requests that the Commission release a Notice of Proposed Rulemaking proposing service and licensing rules for the DSRC spectrum allocation. This NPRM should include a comprehensive review of the appropriate public safety eligibility requirements, including whether such requirements encompass "nontraditional" public safety entities offering DSRC applications.

WHEREFORE, THE PREMISES CONSIDERED, AASHTO urges the Commission to act in conformity with the views expressed herein, and release a Notice of Proposed Rulemaking in response to these reply comments.

Respectfully submitted,

AMERICAN ASSOCIATION OF STATE  
HIGHWAY AND TRANSPORTATION  
OFFICIALS
